

## MAINTENANCE CLEANING

***Cocomosaic panels are easy to maintain.***

Clean regularly with a mop or by vacuum cleaner.

When necessary to wash, washing should be performed with damp cloth, or using a neutral detergent diluted with water.

## STORAGE

***cocomosaic panels are easy to store.***

The products should be stored in a horizontal position, stacked to a maximum of ten boxes.

Must be stored in dry environments, airy and preferably on pallet.

## Questions & Answer

### 1. **Where can we use your innovative products?**

Cocomosaic, Woodenbark mosaic and Envi Mosaic – all have multiple uses, both, commercial and residential. The usage is only limited by one's imagination. In fact, we are also discovering new usages every day.

While these were primarily made for wall and ceiling panels. Our research team is working to make them sturdy for flooring (can be used now for low traffic). Additionally, one can use them for furniture, inlays, table mats, table tops, headboards, chair seats, chair back rest etc.

Kindly visit our website [www.cocomosaic.com](http://www.cocomosaic.com) > Gallery for the usages and real life examples.

### 2. **Can we use the tiles as kitchen backsplash or bathroom walls?**

As long as it is located on walls or ceilings, water don't get stuck there. So it is applicable. Only for some applications in moist areas, you may want to add extra water proof laquer on your own to provide extra guard against water.

### 3. **What is the protection to be taken from water?**

A spilling is really no problem. Just wipe it after that. Yes soaking is not appropriate.

If you install on damped wall, this wall must be applied with water proof layer first. This can be purchased from Home / building store. If you use it for BackSplash area (kitchen), it is alright because water will not go into it, but only drop. We have already some water based laquer on it. On some instances, customers may add extra laquer although it is not necessary.

### 4. **Can we use it for outdoors?**

These are mainly for indoor applications. However, they can also be used outdoors in verandah/patio applications where there is no direct rain. Sunlight will have normal impact on colour.
